JULY 9th.

****JULYS STAR PARTY****

The July star party will be July 9th. , and will be held with the Prescott Astronomy Club. Junes star party was such a success (see below) that Julys star party will be held at the same location: The Filthy Five Inc. Park, Black Canyon City. All the action starts at 5p.m., so plan to attend! Remember; it's close, it's dark and it has restrooms!!

Here's a map.

ANY MORE QUESTIONS?
Call Stan @ 944-6639.

A Thank You Note

The Program Director at The Beatitudes, Lorraine Vance sent the society Sec/Treas. Chuck Nash, a very nice thank you note for the star party the society held for the retirees there last May 21 st. I'm told that the star party was very well recieved by all there.

LAST MONTHS STAR PARTY

Junes star party was a real success, with dark skies and good seeing. The wind, objectionable early in the evening, died down after 9 p.m., and a good time was had by all.

Bob and Clara Pribenow were there, and William Seidler brought his 8 inch Celestron. With William was Brad Hair and Don Dexter. These two Boy Scouts were solving problems in navigation and were finding objects with Williams 'scope using R.A. and Dec. only, not looking at a chart.

Raul Espinoza, with Barbara and Trevor Tuffin, brought his 8 inch 2080 Schmidt. Ann and Joe Hyde were there with thier 2.34 inch Unitron, a real collectors item! The telescope is all original, with a very smooth equatorial mount. Joe still has the original carrying cases and accessories, and all that after 28 years!

Ron Schmidli and Lisa Merrin pointed out Omega Centauri in Rons Quantum Six, the very best I had ever seen that cluster! Stan Gorodenski brought his 12 inch Dall-Kirkham and his portable observatory, both award winners at Riverside this year. The portable observatory came in very handy early on in the evening, sheltering Stans scope from the wind. We were treated to some remarkably good views of Jupiter and Saturn with Stans scope.

The clubs 8 inch (f/4 ?) was set up and gave good views of the Dumbbell and Ring nebulae, also of Albireo.

New-comers there were Dan Heim, who brought his 6 inch Criterion; Deannea and Steve Dagilis made the trip up from Goodyear; and George Metro brought his two sons and a 3½ inch Maksutov.

There were other people there who I havn't mentioned because I didn't take careful enough notes. To them an apology, and to all who were there a " Thank You " for helping to make the star party such a success!!

An Auroral Display

Jerry Maurer reports seeing an impressive display of the Aurora Borealis on the evening of June 12. Jerry was north of Cave Creek close to the microwave tower with a youth group from Chapperal Christian Church that evening. At 9:55 he saw the display; reddish-pink, 60 degrees wide at the horizon and 35 degrees above the horizon. Jerry saw it flare up in brightness and height, sometimes getting as high as 80 degrees above the horizon and completely obscuring the stars in Cassiopia! He reports that it was in a spike-like form, and the show lasted for over 30 minutes! Some people have all the luck, wouldn't you say? Not quite. As he was just showing the heavens to a youth group, he didn't bother to bring his camera. Of course, none of the rest of us have ever neglected to take our cameras and missed a spectacular photo!!

An Editorial

We all know that our society has the very best speakers with up to the minute, state of the art topics; what follows is just another example of this.

On January 28, 1983 Dr. Bradley Whitmore gave us a talk on Gyroscopic Galaxies. A New Class. In this talk Dr. Whitmore also talked about 'the missing mass of the universe' and 'the anonymous galaxy'. Four months later, in the June 1983 issue of Scientific American there appeared an article, Dark Matter In Spiral Galaxies by Vera C. Rubin, an associate of Dr. Whitmore. The article was substantially the same as the presentation by Dr. Whitmore, but we at The Phoenix Astronomical Society got it first!!

We at the society can be very proud of our fine speakers programs, and look forward to other respected astronomers speaking to us in the '83/84 season.

Announcements

William Seidler has given me the address for the W. R. Brooks Observatory Comet Circulars. Also offered by Brooks are computer programs designed for the TRS-80 micro-computer, designed mainly for providing ephemerides and analyzing photometric data. Annual booklets concerning returning periodic comets of interest to amateurs may be in the works. The address for inquiries is:

Brooks Observatory
c/o Mr. John Bortle
Gold Road
Stormville, New York
12582

Dolores Hill of the Lunar and Planetary Lab will be giving a talk to the Saguaro Astronomy Club this July 22 at 7:30 p.m. The subject of her talk will be meteorites from the Moon and Mars. She will give her talk in the Fleming building on the campus of Grand Canyon College.

DIRECTIONS TO SAC MEETING PLACE

Grand Canyon College is located about 1.5 Km (1 mi.) West of the Black Canyon Freeway (Interstate 17). Take Camelback to 33rd Avenue. Take 33rd Avenue North into the campus. The Fleming building is on the right. There are reserved parking spaces in front of the building but there is free parking in the lot to the North of the building.

This month the meeting will be held in the Fleming Building.

Deadline for the August newsletter is July 26. Want ads, observations, telescope making notes or anything of astronomical interest are very welcome. Now's the time to see your name in print! Send your articles to:

Bill Krist
1205 E. Hubbell St.
Phx. Az.
85006

Please include your phone number in case I need to ask any questions. Thank you!

SEPTEMBERS MEETING

Septembers meeting will be on September 23 in room C-102 of the Science Building at Phoenix College. Rick Hill of the Lunar and Planetary Lab will speak to us on Solar Observing For The Amateur.
